(Google Assistant,
Alexa)

Language and Cultural Context

- India has 22 official languages and 100+ spoken dialects
- 68% of users mix Hindi + English ("Hinglish") in voice queries
- 90% of new internet users prefer local language content

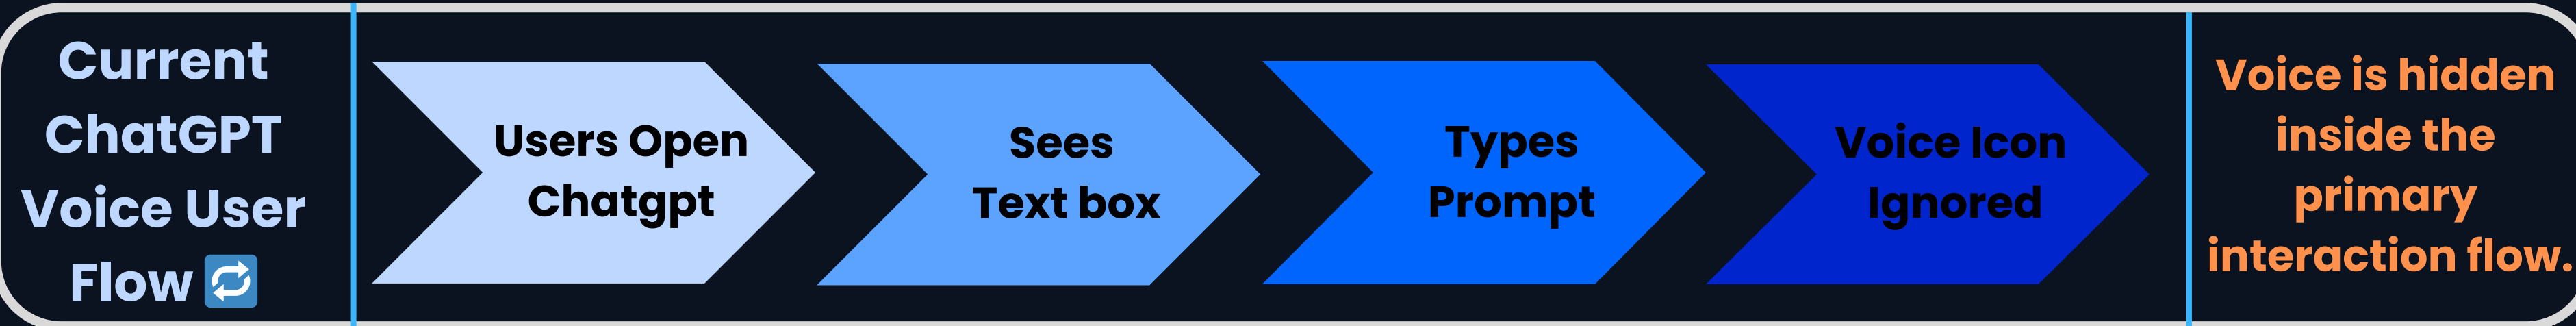

Voice reduces keyboard friction in multilingual markets

How Indians Actually Use Voice 🗣️

Preferred: Music commands, Navigation, Quick queries, Video search
Rarely used: Professional tasks, Complex thinking, Sensitive queries,
Long prompts

**Voice in India is
command-driven, not
conversational.**

ChatGPT Voice UX + Competitor Analysis

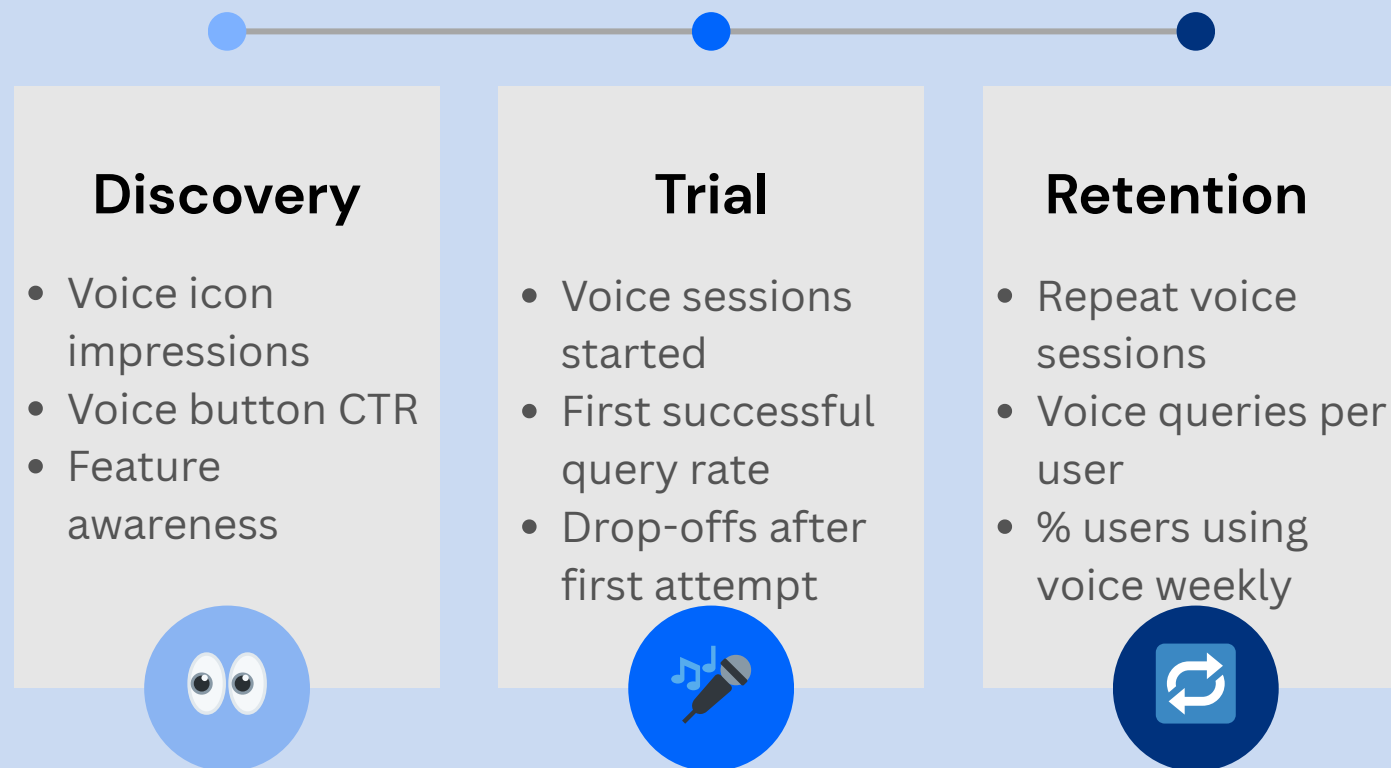

Product Outcomes & KPI Tree

PRODUCT GOAL

Increase adoption and habitual usage of ChatGPT Voice on mobile in India, by improving discoverability, usability, and trust.

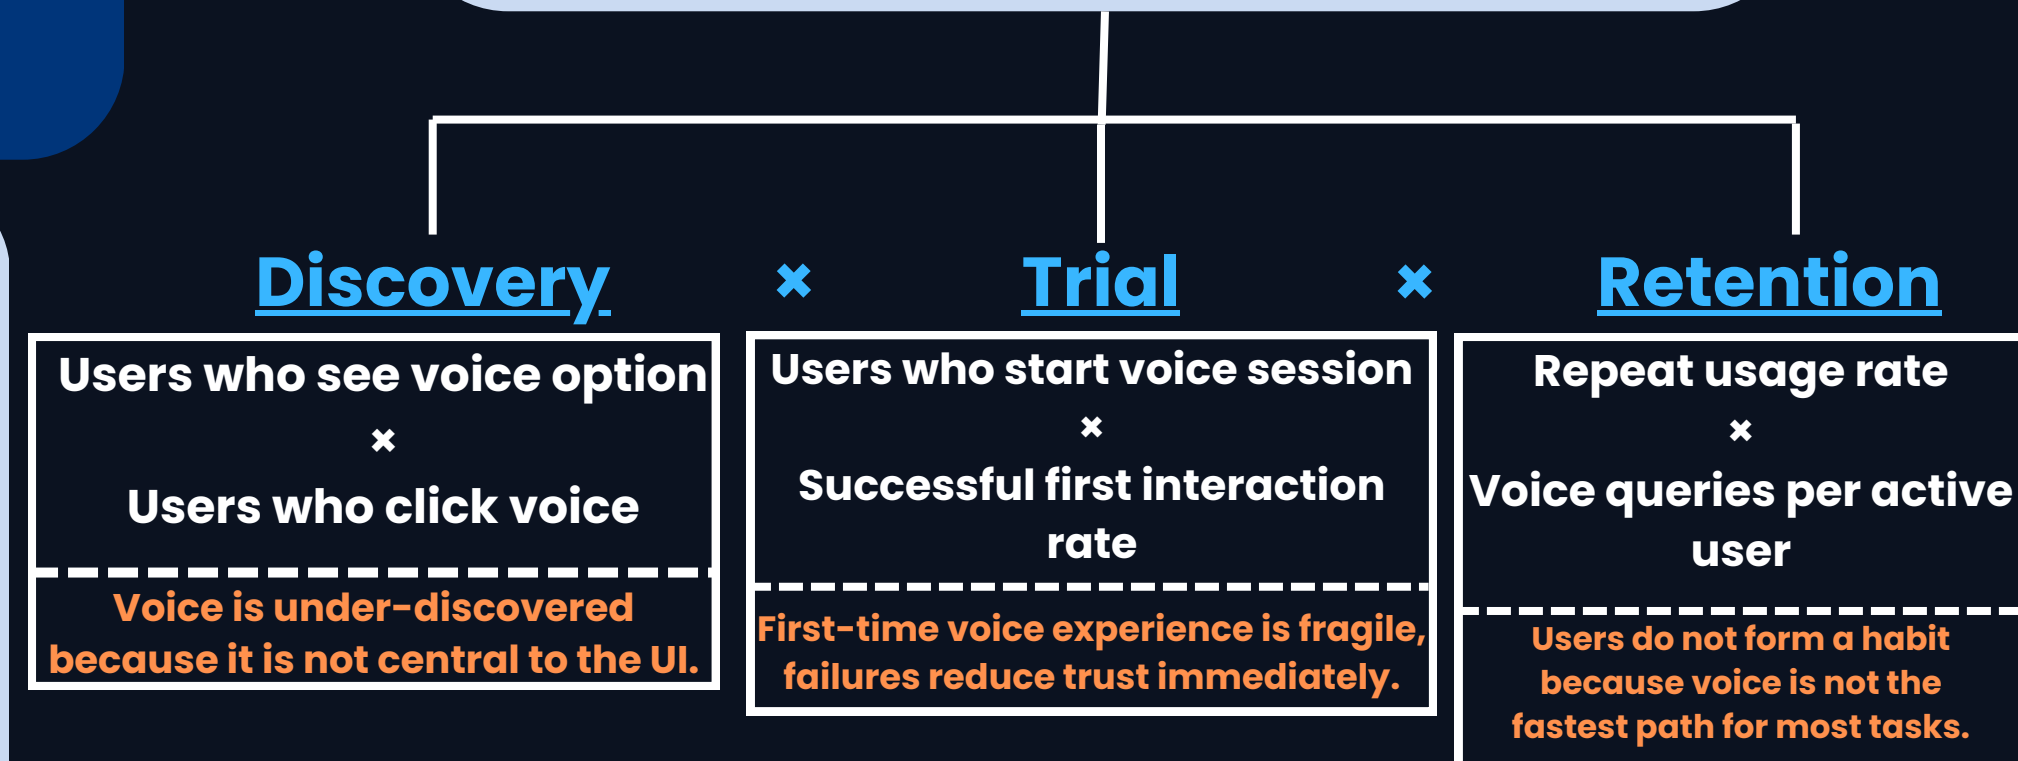

Focus: Move users from trial → repeat usage

Voice Adoption funnel (User behaviour)

North Star Metric

$$\text{Voice Usage Rate} = \frac{\text{Voice Queries}}{\text{Total Queries}}$$

Voice adoption is not a single problem, it is a funnel leakage problem across stages.
Improving any one stage alone will not scale usage.

Key Levers to Improve Voice Adoption

Discovery Levers

- Make voice entry point more prominent
- Add onboarding prompts for voice
- Use nudges ("Try speaking")

Trial Levers

- Improve ASR accuracy
- Provide real-time feedback while speaking
- Allow easy correction/editing

Retention Levers

- Personalize voice responses
- Improve response latency
- Enable multitasking + background mode
